EDUCATION

Georgia State University

B.S. Computer Science, Dec. 2027 | M.S. Computer Science, Dec. 2028

Atlanta, GA

Aug. 2024 – Present

- **Dual-Degree Program in Progress** | GPA: 4.25 | President's List, Fall 2024 – Spring 2026 | **Coursework:** Data Structures & Algorithms, Computer Organization, Theoretical Foundations of CS, Software Engineering, Data Mining, Cloud Computing, Artificial Intelligence, Machine Learning, Linear Algebra, Probability & Statistics

TECHNICAL SKILLS

Languages: Python, C, C++, Java, JavaScript, TypeScript, Swift, SQL, Bash, PowerShell

Software Engineering: Data Structures & Algorithms, OOP, REST APIs, WebSockets, Distributed Systems, Multithreading, Networking, Testing, Debugging, Automation, Performance Optimization

Systems & Infrastructure: Linux/Unix, Docker, Git, GitHub Actions, CI/CD, AWS, EC2, Redis, PostgreSQL, SQLite, Supabase, Cloudflare, Tailscale

Web, Mobile & AI/ML: React, Next.js, Node.js, FastAPI, SwiftUI, WebKit, Scikit-learn, PyTorch, LangChain, LangGraph, RAG, LLM APIs, Ollama, llama.cpp

TECHNICAL PROJECTS

FYouTube Premium [GitHub](#) | JavaScript, WebKit, Browser APIs, GitHub Actions, CI/CD

2026 – Present

- Built and shipped a cross-browser software product with **19 GitHub stars, 56+ commits, and 16+ features**, extending YouTube on iPhone through runtime DOM/WebKit modification, event-driven state management, browser APIs, and persistent client-side controls.
- Reverse-engineered a continuously changing web application and engineered runtime systems for background playback, AirPlay, captions, navigation, media controls, and lifecycle recovery without access to the underlying application source code.
- Diagnosed asynchronous state, event ordering, DOM mutation, and browser compatibility failures across **WebKit, Chrome, and Firefox**; reproduced external failures and implemented defensive recovery paths for dynamic page transitions and application state changes.
- Built browser-specific packaging, regression checks, **GitHub Actions CI/CD**, release automation, versioned artifacts, and architecture/troubleshooting documentation to support repeatable testing and deployment.

Zirn zirn.app | Swift, SwiftUI, SQLite, REST APIs, Ollama, GitHub Actions

May 2026 – Present

- Architected and shipped a local-first macOS knowledge application combining document ingestion, persistent storage, graph-linked state, local/cloud computation, asynchronous API integrations, search, and structured knowledge-processing workflows.
- Designed a provider-independent inference layer spanning multiple REST APIs and local **Ollama/llama.cpp** models; implemented similarity-based context filtering that reduced measured API token consumption by approximately **40%**.
- Engineered SQLite-backed persistence, source registries, graph-linked document relationships, Keychain credential storage, local file processing, provider routing, failure handling, and reusable application interfaces.
- Owned production release engineering through automated builds, **GitHub Actions**, Developer ID signing, Apple notarization, DMG packaging, version management, and Sparkle update distribution.

Local AI & Systems Infrastructure | Python, C++, Linux, Docker, ROCm, llama.cpp, Redis, SearXNG

2026 – Present

- Built a self-hosted inference environment for quantized **Qwen and Mixture-of-Experts models** using llama.cpp, LM Studio, ROCm, and AMD GPU hardware; benchmarked Q3/Q4 quantization, memory constraints, context length, and inference tradeoffs.
- Diagnosed model and agent failures caused by GPU memory limits, unsupported context requirements, dependency conflicts, and unreliable tool execution; iterated across model size, quantization, runtime, context configuration, and service isolation.
- Containerized agent dependencies into isolated **Docker** services for SearXNG search, browser automation, Redis-backed state, and local network services, reducing cross-tool dependency conflicts and improving failure isolation and reproducibility.

EXPERIENCE & LEADERSHIP

Regal Cinemas

Floor Staff

Atlanta, GA

Aug. 2025 – Present

- Resolve customer and operational issues in a high-volume environment while coordinating across teams; handled **100+ transactions during peak events** while maintaining transaction accuracy and service continuity.

GSHacks – Second Place | **Truist GSU Technology Immersion CTF** – Top 10 Team

2024 – 2025

- Built and presented software under constrained competition deadlines and led collaborative technical problem solving across Linux, networking, packet analysis, application security, and software development challenges.
